

Write your app's name and tagline.

Name : Meloditect

Tagline : Find Melodies in a whim !

Write a short paragraph describing your app. Make sure to mention what the app does and what problem it solves.

Meloditect is an application that lets you find out the songs just by you using your voice to sing in a melody resembling the song.

The app , with a push of a button lets user record its voice , which then converts the voice into a unique audio print which is then put into the servers looking for a potential match with other audio prints from other users and the internet itself , apart from looking at a server , the user can also join the Melodian community , where you can personally interact with people across the globe .

post your voice/ melody , to let other melodians help you find the source of the tune that was stuck in your head

It helps user find the songs they were looking for or forgot but only remembered either the lyrics or just the melody

Describe four specific functions that your app will do. List these ideas in order of importance, with the first idea being the most important.

- Take the annoying feeling of not knowing the song away
- The app will let users find the songs they were having trouble finding by their own voice
- The app will allow users and be part of the melodians community and help each other with similar issues
- users can also post lyrics to find the song they were looking for

List 4 potential roles that are a part of your initial user target group. Then, expand on one of the roles with a detailed profile description of one of these potential users.

- People who wants to save the trouble of extensive searching(save time)
- People who are into music
- Who want to be socially active around other people who are also into music (social people)
- people who just want to know what that song was

Yuri Tarded is a busy young music artist who needs a song to sample for her new song but just remembers the tune of the song she needed to sample ,she doesnt have time to go over the internet and do extensive searching as she just remembers some few words and the melody of the song.

Come up with 4 client/designer goals for your app design. You don't have to assign these to a category (political, social, etc). List your goals in order of importance, with the first goal being the most important.

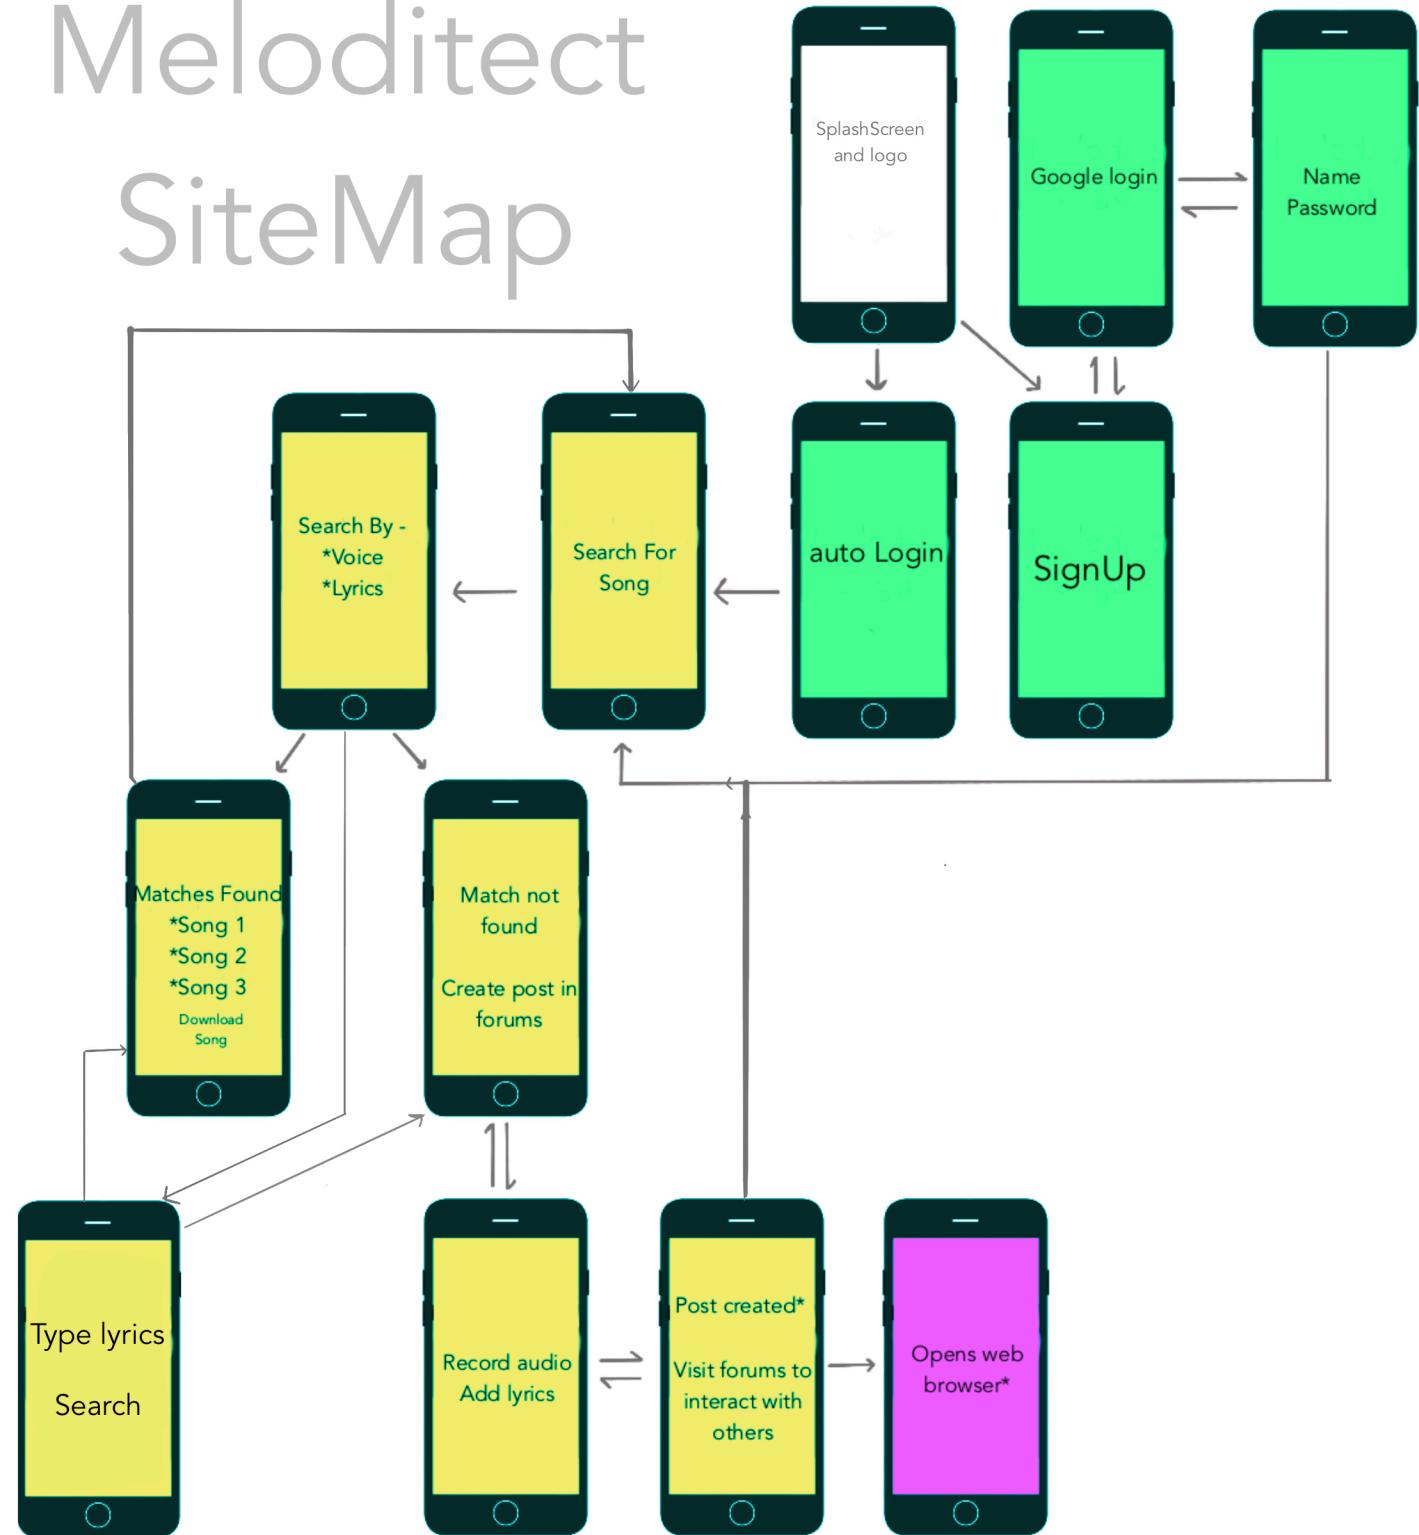

- Build a community dedicated to this
- Take the annoying feeling of knowing just the tune or the lyrics and not the song
- make money
- provide useful app

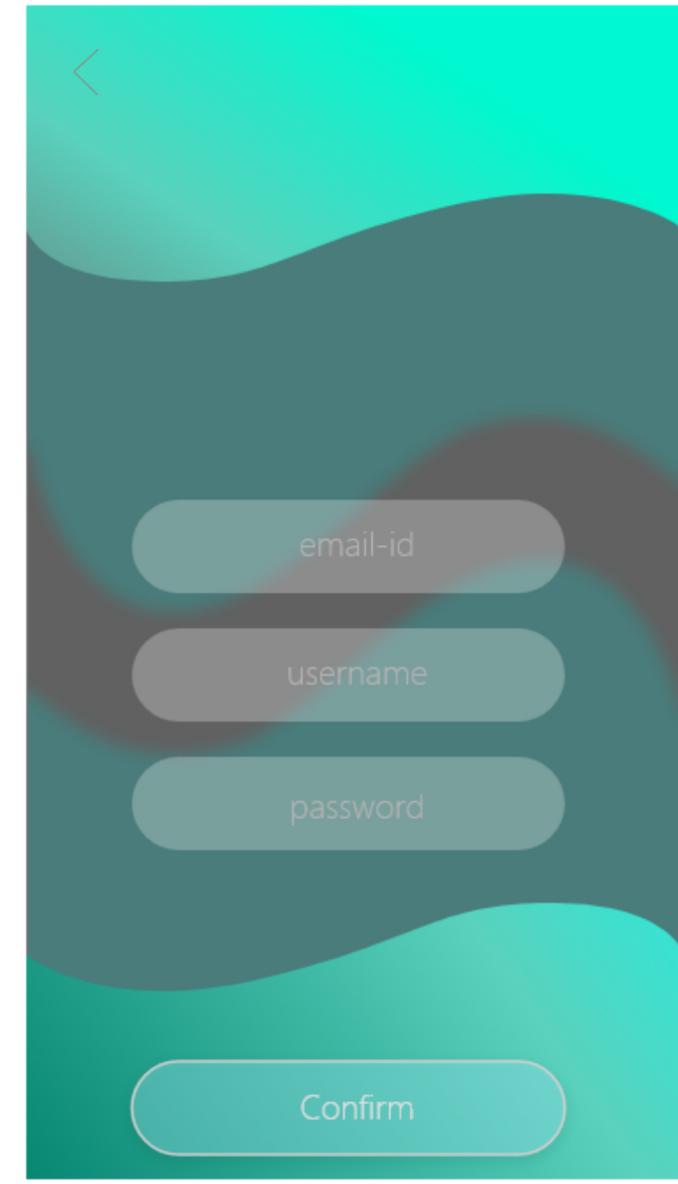

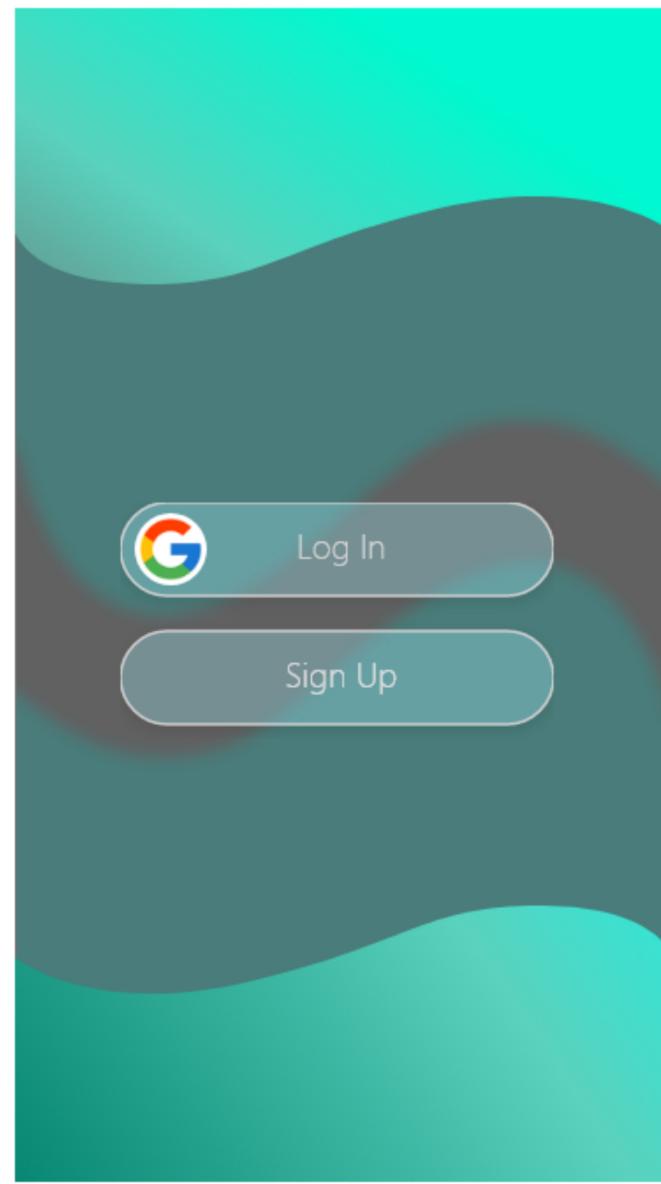

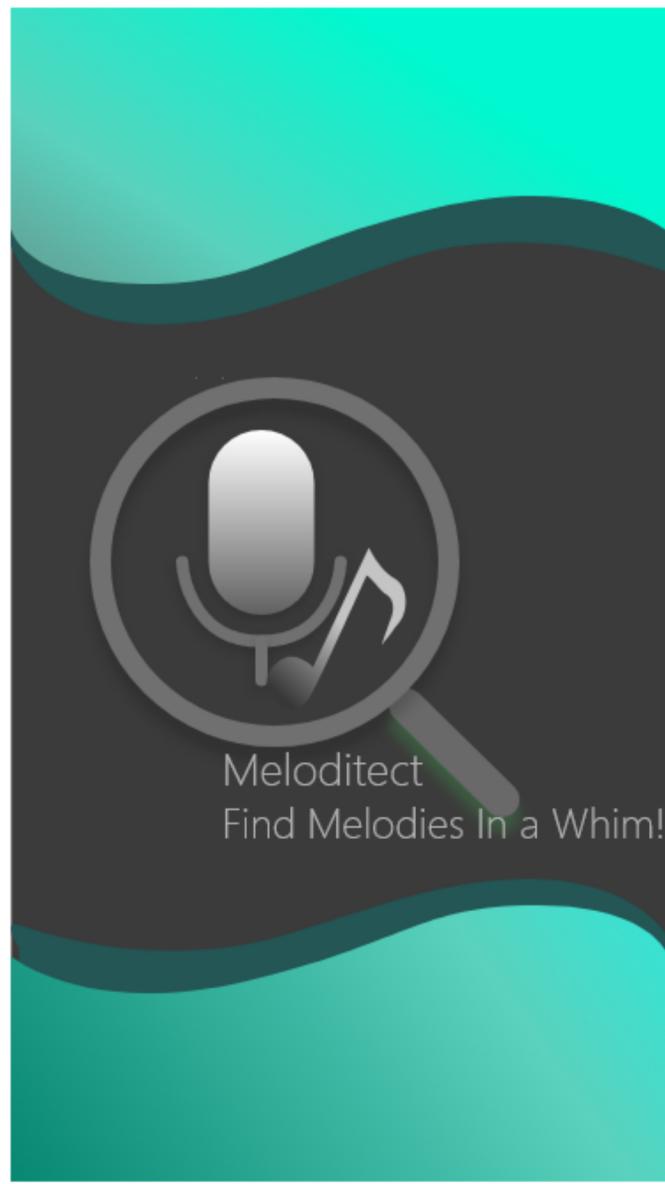

Name and briefly describe 3 existing apps that are similar to your app idea.

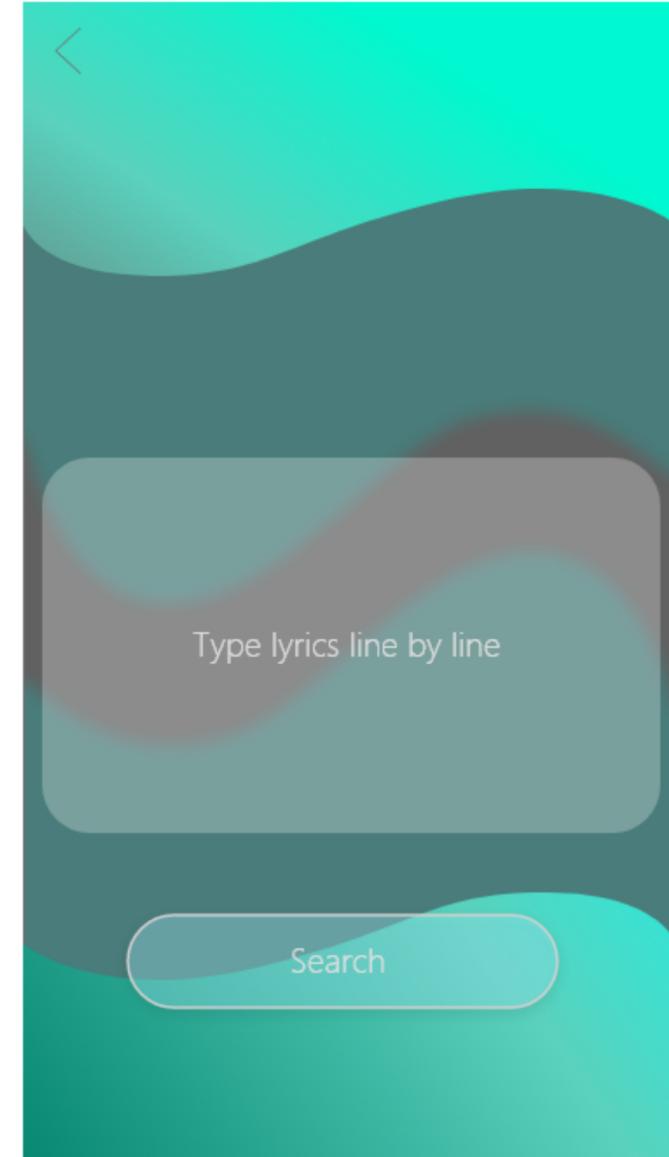

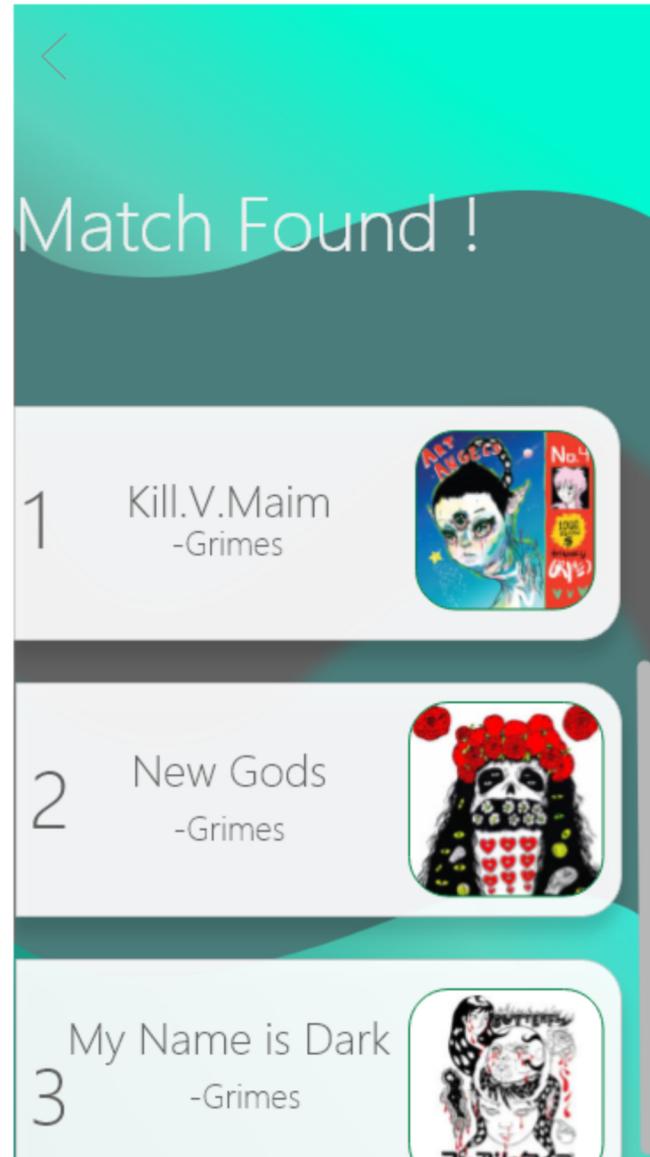

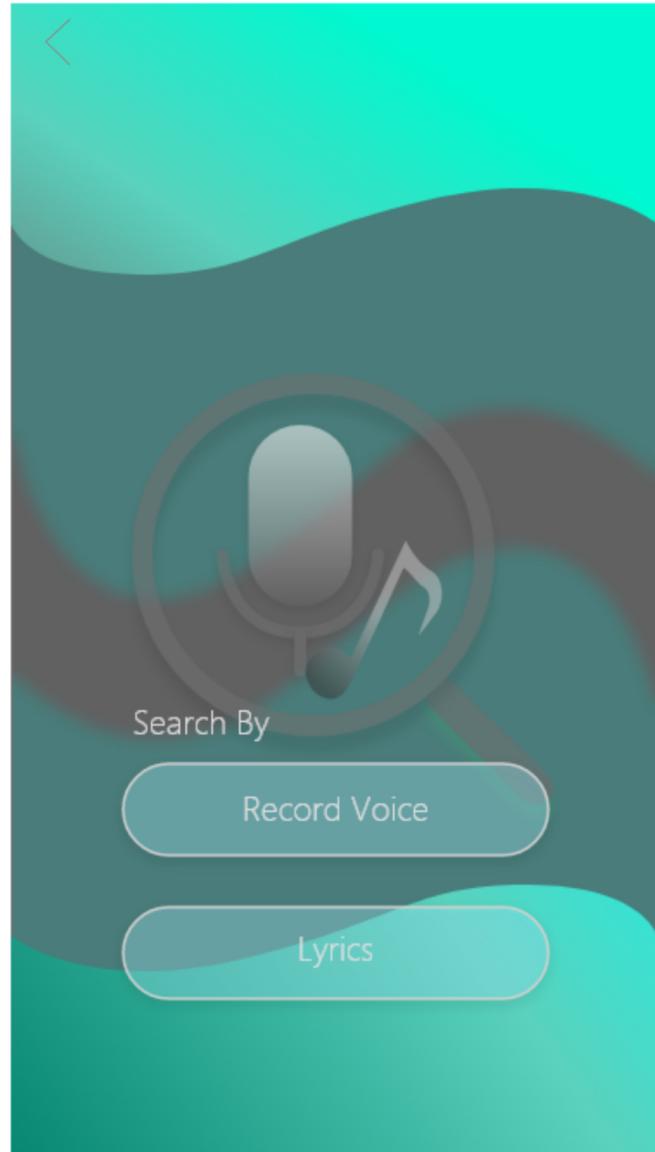

soundhound , shazam , musicFinder.
